Sneak Preview.

- Saves Money
- Saves Time
- Reduces User Delays
- Reduces Carbon Footprint
- Reuses Existing Pavement
Who is **Gallagher Asphalt**?

- Founded in 1928
- 3rd-Generation, Family-owned Highway Paving Contractor
- Asphalt Plants throughout the Chicagoland area
- Well-respected and active member of NAPA, ARTBA, NCAT, ARRA
- Hot-in-Place Recycler for over 65 years
- 3rd Largest HIP Recycler in the U.S.
Agencies We’ve Worked For...

- Waukesha County, WI
- Hayward, CA
- Lake County, IN
- Tinley Park, IL
- Adams County, OH
- Roxbury Township, NJ
- Howard County, MD
- St. Louis County, MN
- Lafayette County, WI
- Obion County, TN
- Cobb County, GA
- Atlanta, GA
- Chisago County, MN
- Ingham County, MI
- DeWitt County, IL
- St. Louis County, MO
- Bernards Township, NJ
- Wilkin County, MN
- Cook County, IL
- Bartow County, GA
- Washington County, TN
- Rock Island, IL
What is Asphalt Recycling and Pavement Preservation?
Milling
Hot-in-Place Recycling
Cold-in-Place Recycling
Full Depth Reclamation
Soil Stabilization
ADMINISTRATOR’S MESSAGE:
The National Highway System (NHS) is extensive, with over 160,000 miles of highway pavements and over 128,000 structures, built using large quantities of asphalt, concrete, steel, and aggregate, and smaller quantities of nonferrous metals, plastics, and other materials. Much of the system was constructed in the 1960’s and 70’s and is in need of major rehabilitation or total reconstruction; and much of the materials used to build that system can be recycled for use in the new construction.

In order to carry out the mission of the FHWA, i.e., to “improve the quality of the Nation’s highway system,” the NHS must be properly preserved, maintained, rehabilitated, and when necessary, reconstructed. Maintenance of highways and associated structures is critical to our ability to provide the safest, most efficient roadway system possible, while simultaneously providing the greatest level of protection to the human and natural environment.

The same materials used to build the original highway system can be re-used to repair, reconstruct, and maintain them. Where appropriate, recycling of aggregates and other highway construction materials makes sound economic, environmental, and engineering sense. The economic benefits from the re-use of nonrenewable highway materials can provide a great boost to the highway industry. Recycling highway construction materials can be a cost-saving measure, freeing funds for additional highway construction, rehabilitation, preservation or maintenance.
Congress declares that it is in the national interest to promote the use of innovative
technologies and practices that increase the efficiency of construction of, improve the
safety of, and extend the service life of highways and bridges…The innovative
technologies and practices described in paragraph (1) include state-of-the-art intelligent
transportation system technologies, elevated performance standards, and new highway
construction business practices that improve highway safety and quality, accelerate
project delivery, and reduce congestion related to highway construction…such as…‘(ii)
innovative construction equipment, materials, or techniques, including the use of in-
place recycling technology and digital 3-dimensional modeling technologies;
What is the Hot-in-Place Recycling SURFACE METHOD?

Hot-In-Place Recycling Surface Method is an on-site, in place, pavement rehabilitation method that consists of heating, scarifying, mixing, replacing and re-compacting the existing bituminous pavement.
HIR as an Alternative to:

• Mill & Overlay

• Hotmix Overlay

• Precursor to Chip Sealing or Microsurfacing

• Watermain Replacement Streets
Pre-requisites for HIR:

• Pavement must have at least 3” of hotmix asphalt
• Pavement must be structurally-sound with no base failures
• Pavement must not contain petromat within top 2.5”
• Multiple layers of chip seal pavements can be problematic
• Rubberized Crack Filler is very problematic
What is the Conventional Heater Scarification SURFACE METHOD?
Surface Recycling: Step 1

• 1st Pre-Heater takes pavement temp to 180 – 200 degrees
Surface Recycling: Step 2

- 2nd Heater takes pavement temp to 280 – 300 degrees
Thermo Study
Surface Recycling: Step 3

- Introduction of rejuvenating agent
HIR introduces a rejuvenating agent typically at the rate of 1/10th gallon per square yard.
Surface Recycling: Step 4

• Spring-loaded tines set hydraulically at prescribed depth will drag over existing structures to avoid damage
Surface Recycling: Step 5

- Full width reversible augers to re-mix
Surface Recycling: Step 6

- Re-profiling with standard paving screed
Surface Recycling: Step 7

• Roller
Open to Traffic. . .
Surface Recycling: Step 8

The now re-plasticized asphalt is ready to receive its final surface course; such as:

- Hotmix
- Microsurface
- Slurry Surface
- Chip Seal
What Types of Asphalt Pavements Are Candidates for Hot-in-Place?
Typical Candidates for HIR:

- Thermal Cracking
- Fatigue Cracking
- Patches
- Poor Rideability
- Raveling
NON-Candidates for HIR:
COST SAVINGS COMPARISON

1.5” HOT IN-PLACE RECYCLING (HIR) $4.75/ SY

CHIP SEAL $1.50/ SY

2” MILL & OVERLAY Various putdown price points per ton + $2/ SY for milling

COST SAVINGS

$65/TON $8.83 2” Traditional Mill & Fill vs. $7.25 1.5” HIR Chip Seal 18% SAVINGS

$75/TON $9.88 2” Traditional Mill & Fill vs. $7.25 1.5” HIR Chip Seal 27% SAVINGS

$85/TON $10.93 2” Traditional Mill & Fill vs. $7.25 1.5” HIR Chip Seal 34% SAVINGS

Comparison: # of Truck Trips / Mile

Standard 2 ¼” Mill & Overlay (215 trucks)

HIR w/ 1” Hotmix Overlay (53 trucks)
So What Have We Done?
Wisconsin
Minnesota
Oregon
Key Take-Aways:

- Nominal 1.5” Scarification Depth
- Preliminary Coring PRE-BID
- Budgetary Price: $4.75/SY
- Minimum Quantity: 75,000-100,000 Sys
- Daily Production: 12,000 Sys
- Non-Proprietary
The Bottom Line Re-Cap:

- Saves Money
- Saves Time
- Reduces User Delays
- Reduces Carbon Footprint/Green
- Reuses Existing Pavement
  - 100,000 Years!
Cobb County, Georgia

• Timing: Summer 2006

• Quantity: Approximately 50,000 SYs
Washington County, Minnesota

- Timing: Summer 2010
- Quantity: Approximately 60,000 SYs
Waukesha County, Wisconsin

- Process: Heater Scarification
- Quantity: 1 million+ SYs
City of Manistee, Michigan

- Timing: 2009
- Quantity: 63,000 SYs
