U.S. Department of Transportation Awards \$1 Million to Missouri's I-270 Predictive Layered Operations Initiative

Tuesday, June 16, 2020

FHWA10E-20

Contact: Nancy Singer

Tel.: (202) 366-0660

WASHINGTON – The U.S. Department of Transportation's Federal Highway Administration (FHWA) today awarded a \$1 million Advanced Transportation and Congestion Management Technologies Deployment (ATCMTD) grant to the Missouri Department of Transportation for its Predictive Layered Operation Initiative (PLOI) on I-270. The ATCMTD program this year awarded grants valued at \$43.3 million to ten projects that use cutting-edge technologies to improve mobility and safety for America's travelers.

"This \$43.3 million in federal funding will advance innovative technologies that will improve mobility and safety in America's transportation network," said U.S. Transportation Secretary Elaine L. Chao.

The Missouri project will deploy a predictive analytics platform that uses complex algorithms based on traffic, weather and incident data to improve response and operations. The system will use predictive models that consider several different factors, traffic volumes, weather or special events, to determine the likelihood of crashes and identify response times. The project aims to improve public safety by modeling, for example, whether crashes would increase as the result of traffic increases from a major sporting event.

FHWA's ATCMTD program funds early deployments of forward-looking technologies that can serve as national models. This year, the grants will fund projects that use advanced real-time traveler information, vehicle communications technologies, artificial intelligence, regional approaches and bicycle-pedestrian safety features.

"The program selections this year aim to benefit communities across the country by improving safety and efficiency on our roads through the deployment of advanced technologies," said Federal Highway Administrator Nicole R. Nason. "State-of-the-art systems will improve winter maintenance and traffic incident management along I-270 in Missouri."

I-270 PLOI Goals

- Improve **Safety**
- Improve **Mobility**
- Improve MoDOT
Emergency Response (ER)
vehicle **response time**
- Improve return on
investment and realize
cost savings

Predictive Analytics

- Rekor
- Crash Risk Area Prediction
- Incident Identification

IMRCP

1/25/2023 Winter Weather Event

The screenshot displays the IMRCP software interface. On the left, a grey panel titled 'Create and Edit Groups' provides instructions on how to create and manage road segment groups. The central map shows a network of roads with three specific segments highlighted: a red segment (I270wb), a green segment (I270eb-return), and a blue segment (367sb-nb-return). On the right, the 'Scenario Settings' panel shows the current scenario name 'StL_Bellefontaine_I270-367_plowin...', a dropdown for 'Road Weather Model', and a table of the selected groups. At the bottom of the settings panel are buttons for 'Load', 'Run', and 'Restart'.

Create and Edit Groups

A scenario consists of groups of road segments associated with actions

Groups cannot be added until a forecast model is selected. Once a group is added, the forecast model cannot be changed

Enter a name and left-click "Add Group" to create a new group

Valid characters for scenario and group names include a-z, A-Z, -, and _

- A** Add/remove segment mode
- Edit action/values mode
- X** Remove group

Left-click "Run" to submit the saved scenario template for processing.

Left-click "Load" to load an existing scenario template

Left-click "Restart" to remove current scenario and start over

Evaluation – Staff Interviews

TMC Operators

- **Benefits:**
 - Rekor and TrafficVision identify unknown incidents
 - Helps pinpoint location of incidents
- **Difficulties:**
 - Duplicate incident listings create additional work

Emergency Response Operators

- **Benefits:**
 - Gives operators map of incidents
 - Rekor reduces radio traffic
- **Difficulties:**
 - GPS location issues
 - Cannot keep tablet on while driving
 - Safety protocols prevent full use

MoDOT Supervisors and Managers

- **Benefits:**
 - Consolidated Information
 - Creates historical data
 - Provides organizational experience
- **Difficulties:**
 - Not all platforms were user ready
 - Prediction accuracy

Lessons Learned

- Internal and External knowledge and expectations
- Level of trust in data and result
- Frequency of use
- Data availability, relevance, and cost
- Limitation due to Covid
- Staffing levels
- Integration of multiple technologies
- Weather
- Rules, policies, requirements, etc.
- Duration of the project

What's next.....

1

Continue evaluating results every quarter.

2

Integrate in progress data to predictive analytics.

3

Full integration between ATMS and predictive analytics.

4

Full camera stream straight from ATMS to Traffic Vision.

5

Final evaluation report and final recommendation.

Thank you
